

PGE reports record clean energy resources in newly released 2024 Environmental, Social and Governance Report, "Advancing Toward a Clean Energy Future"

March 5, 2025

In 2024, PGE saw increases in clean energy resources, large customer participation in voluntary clean energy programs, record fish returns at hydro facilities and increases in employee volunteerism.

PORTLAND, Ore., March 5, 2025 /PRNewswire/ -- Portland General Electric (PGE) today reported a record 45% of the energy it generated and procured came from non-carbon-emitting resources in 2024. This represents a 7% compounded growth rate in PGE's non-emitting resource mix since 2020, building on the company's commitment to reach net-zero by 2040.

The data was reported in the company's 2024 Environmental, Social and Governance Report, "Advancing Toward a Clean Energy Future," which details the company's progress in creating resilient energy, thriving communities, and ethical governance.

The increase in clean energy is partly due to new renewable resources including the Clearwater Wind Energy Center and battery storage systems which brought increased availability and reliability to PGE's energy mix. These systems, along with the rest of PGE's technology and infrastructure, work together to provide reliable, clean energy even when the wind doesn't blow and the sun doesn't shine.

"While we work to meet the challenges of Oregon's ambitious clean energy targets, we also remain firmly committed to providing safe, reliable power as affordably as possible," said Kristen Sheeran, PGE's Vice President of Policy and Resource Planning.

The role of PGE customers in support of a modern, reliable grid also increased in 2024. Twenty-four percent of PGE's residential households participated in voluntary programs to shift energy use and lend flexibility to the grid during times of peak demand. The result, during a two-day heatwave in July, was a more than 100-megawatt reduction in demand, which PGE equated to the energy used by 90,000 homes over a four-hour period.

2024 was also the 15th year in a row in which PGE has achieved [a Number One ranking](#) from the U.S. Department of Energy's National Renewable Energy Laboratory for the largest customer participation in a renewable energy program among U.S. electric utilities.

Additionally, strong environmental stewardship at PGE's hydro facilities led to record-setting fish returns on the Clackamas and Deschutes Rivers. This includes the highest steelhead return to Round Butte Dam since dams were completed in the 1960s.

Employee and corporate giving also increased. The total company charitable giving from corporate contributions, PGE Foundation, current and retired employees and company match was \$5.5 million in 2024. PGE awarded 55 scholarships, focused on higher education for underrepresented students, women and students with demonstrated financial need. Employees and retirees donated nearly 23,000 total volunteer hours, and 66% of PGE employees participated in charitable giving and/or volunteerism.

1. Percentages above represent 2024 resource mix from PGE's total system load, inclusive of wholesale volumes. The percentage of 2024 retail load, excluding wholesale sales, served by non-emitting resources is 40%. Refer to the appendix for additional information.
2. Represents owned and contracted solar resources, does not include the 264,826 MWh of customer owned rooftop resources.
3. Hydro amounts include purchases from Bonneville Power Administration, which may have an immaterial amount of emissions associated with them, per ODEQ rules.
4. Unspecified is purchased power for which a specific generating resource is not defined and could be any of the generation types (e.g., wind, hydro, gas).
